

Opposite Sides

Examples & Non-Examples

Example	Example	Non-Example
		

Definition

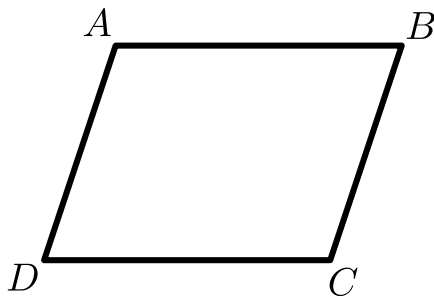

Two sides of a polygon that are across from each other and do not share a vertex.

In simple terms:

Sides that face each other.

Example:

In parallelogram $ABCD$, AB and CD are opposite sides. BC and AD are also opposite sides.

Important Note (Parallelograms):

In a parallelogram, opposite sides are both **parallel** and **congruent**.
