

Square

Examples & Non-Examples

Example	Example	Non-Example
		

Definition

A parallelogram that is both a rectangle (four right angles) and a rhombus (four congruent sides).

In simple terms:

A four-sided shape with all sides equal and all corners 90° .

Example:

A standard chessboard square is a perfect square.

Important Notes:

- Opposite sides are parallel and congruent.
- Opposite angles are congruent (all 90°).
- Diagonals are congruent, bisect each other, and are perpendicular.
- All properties of rectangles and rhombuses also apply.
